## Show me some code

---

```
from xlsx_streaming import stream_queryset_as_xlsx

data = [
    ('hello', 42, datetime.datetime(2016, 5, 20))
    for _ in range(4000)
]

stream = stream_queryset_as_xlsx(data)
```

## Show me some code

---

```
from xlsx_streaming import stream_queryset_as_xlsx

data = [
    ('hello', 42, datetime.datetime(2016, 5, 20))
    for _ in range(4000)
]

stream = stream_queryset_as_xlsx(data)

StreamingHttpResponse(stream)
```

## Show me some code

```
from xlsx_streaming import stream_queryset_as_xlsx

data = [
    ('hello', 42, datetime.datetime(2016, 5, 20))
    for _ in range(4000)
]

with open('template.xlsx', 'rb') as template:
    stream = stream_queryset_as_xlsx(data, template)

StreamingHttpResponse(stream)
```
